Reader sample

A PDF opened by Choir Reader, before sign-in, with no computer behind you.

One window for long things

Reader is the quiet place where Choir keeps papers, reports, manuals and books. It opens PDFs and EPUBs, and it opens onto the place you left.

A page of prose wants a measure, not a viewport. Reader sets one, and keeps the text size you choose. Search finds a page in a PDF and a paragraph in an EPUB, without leaving the document and without the network.

Signed out, your text settings are kept in this browser, and nowhere else.

Reading position

This is the second page of the sample, so the page controls have somewhere to go. Signed in, Reader remembers where you stopped on your computer, through the media progress route, and follows you to any device. Turn the page with Next page, the arrow keys, or the floating arrow.

The PDF and EPUB windows stay

The PDF and EPUB windows remain in the launcher, unchanged, for anything Reader has not learned to do yet.
